Anti-ghostwriting and guest authorship policy

General information

Reliability of science is one of its qualitative foundations. Readers should be guaranteed that authors of publications present the results of their work in a clear, reliable and honest manner regardless of the fact whether they are the direct authors of publication or they took benefit of specialized help (natural or legal person). Openness of information on any party contributing to preparation of a publication is proof of ethical attitude of a research worker and of high editorial standards and that is an indication of both good practice and social responsibility.

Ghostwriting and **guest authorship** are contradictory examples.

Ghostwriting is a situation where a person contributes significantly to a publication and is not disclosed as one of the authors or named in the acknowledgments.

Guest authorship (honorary authorship) is a situation where an author's contribution is insignificant or nonexistent and he/she is still listed as co-author of a publication.

Anti ghostwriting procedure

Access to complete information about all subjects contributing to the creation of every text published in our journal is a proof of appropriate conduct of an academic standard as well as confirmation of high editorial standard.

To ensure the accuracy of the published information, our editorial team takes action to counter ghostwriting practices.

1. The editorial office explains in the *Information for Authors* that **ghostwriting** and **guest authorship** are indication of scientific dishonesty and all cases will be exposed, and adequate institutions will be informed (employers, scientific societies, scientific editors associations, etc.).
2. The editorial office requires authors to disclose contribution of individual authors to preparation of a publication in detail, i.e. provide information on who is the author of concepts, theoretical developments, analyses, etc., used in the publication. Main responsibility to disclose full information remains on the author submitting manuscript (Corresponding Author).
3. The editorial office should acquire information on sources of financing of a publication, financial contributions of research institutions or scientific associations.
4. The editorial office documents all indications of scientific dishonesty especially of violation of ethical principles followed in science.

The authors are obliged to fill in the *declaration concerning ghostwriting, guest authorship and authors contribution* and to upload a scanned copy of the signed original to Editorial System. The document template can be downloaded from the journal's webpage.
